

## PCIT Adapted for Anxiety

**Steven MS Kurtz, PhD, ABPP**  
PCIT Master Trainer  
Founder, Mighty Mouth Kids Camp  
Kurtz Psychology Consulting PC

## Financial Conflict of Interest Disclosures

*PCIT International CE video*

## Presentation Overview

1. *Child anxiety*
2. *Anxiogenic parenting*
3. *Selective Mutism (SM) as paradigm for PCIT adaptation*

## What do we know about child anxiety?

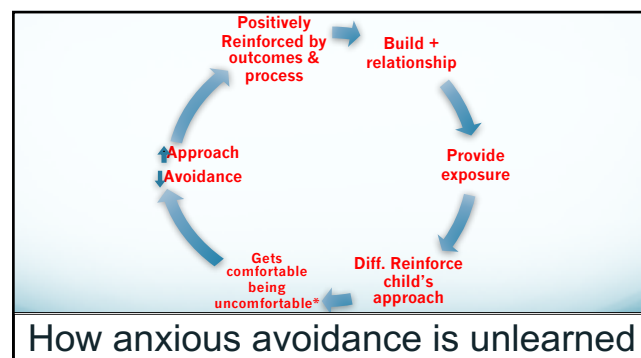

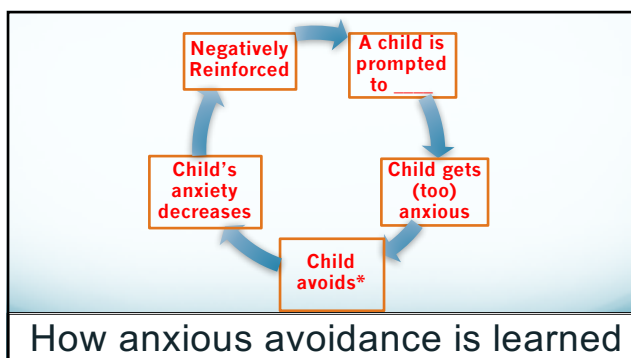

## Anxiety Disorders Trajectories

- Anxiety disorders affect up to 9% of preschoolers\*
- 25% adolescents suffer from anxiety disorder past year
- Early onset associated with
  - More intractable
  - Poorer outcomes over time
- Overall reduced quality of life when persisting
- Comorbidities are the rule not the exception\*\*

\*Carpenter et al. (2014)    \*\*Kendall, Brady, & Verduin (JAACAP; 2001)

## Current Conceptualization of SM

**What do we know about treating early childhood anxiety disorders?**

Kendall's Coping Cat Program\*:  
Ages 7-13

\*Numerous replications: [nrepp.samhsa.gov/nrepp.samhsa.gov/](http://nrepp.samhsa.gov/nrepp.samhsa.gov/)

**Why do child CBT anxiety studies typically exclude children < 7 years old?**

**So what's a therapist to do for a young anxious child?**

**Extending Parent–Child Interaction Therapy for Early Childhood Internalizing Problems: New Advances for an Overlooked Population**

Aubrey L. Carpenter • Anthony C. Puliafico •  
Steven M. S. Kurtz • Donna B. Pincus •  
Jonathan S. Comer

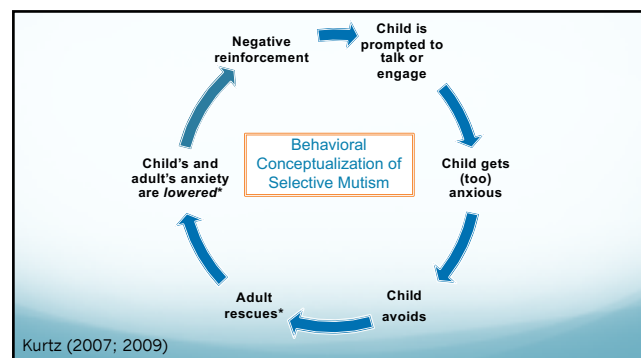

Clin Child Fam Psychol Rev (2014)

### Lateral Extensions of Parent-Child Interaction Therapy (PCIT) for Anxiety & Mood

- **PCIT-SAD** (Pincus et al., 2005; Choate et al., 2005)
  - Separation Anxiety
- **PCIT-CALM** (Comer et al., 2012; Puliafico et al., 2013)
  - Various anxiety disorders
- **Turtle Program** (Chronis-Tuscano et al., 2015)
  - Behaviorally inhibited (BI)
- **PCIT-ED** (Luby et al., 2012)
  - Early-onset depression

## PCIT as a Paradigm for Treating Selective Mutism

### What is selective mutism (SM) ?

### Contaminated

### Hypotheses Relating SM & ODD

- Both maintained by *negatively reinforced interactions*
- Both lead to *experiential avoidance*
  - By parent & child
- Both can *only* happen within a relationship
  - You can't be oppositional by yourself
  - You can't be non-responsive by yourself

**CAVEAT !!!**

Although drawing from PCIT & DPICS,  
SM is NOT being conceptualized here as  
oppositionality !!!

Rather, we are adapting a technology of assessing  
and intervening with parent-child *interactions*  
which are seen as key to both the development  
and maintenance of SM.

**Reasons to Treat SM using  
Parent Training**

- Parent interactions are a maintaining variable
- Modal child with SM is too young for CBT\*
  - RCTs for anxiety, e.g., CAMS ages 7+
- The situational specificity of the disorder requires an in situ therapist – parents are ideal

\*Carpenter et al. (2014); Kurtz (2015)

**Similarities of PCIT & PCIT-SM:  
Same Core Components**

- Learning theory drives assessment & treatment
- Empower parents as agents of change
- Antecedents to set up for success
- Overlearning
- Contingency management ≠ token economy
- Increasing parental distress tolerance

**Similarities of PCIT & PCIT-SM:  
Same Core Components**

- Coding → Coaching
- Nondirective → Directive
- Systematically increase task difficulty
  - CDI → VDI
  - Private → Public
  - Responding → initiating
  - Eye contact
  - Manners

**Key Differences Between PCIT & PCIT-SM**

- Therapists and teachers purposely faded in as agents of change
  - Parents purposely faded out
  - Token economy
  - Massed practice vs spaced practice – intensive treatments
  - Group treatments as default adjunct
  - Do not recommend indirect commands outside of sessions
  - Questions are radically necessary
  - More programmed generalization
  - Extensive live and video modeling by therapists for parents
- Extensive use of undergraduates and graduate students who are not PCIT therapists or therapists in official training sequence

**CDI (Child Directed  
Interactions)  
- or -  
VDI (Verbal Directed  
Interactions)**

## Do's & Don'ts in SM-CDI

### Do's

Labeled Praise for talking	Mind read
Reflect verbalizations	Questions
Play-by-Play Announcer (Behavioral Descriptions)	Commands to talk
Use question end-arounds	Negative Talk
Play to strengths	

### Don'ts

Whac-a-Mole: **All** verbals attended to

## Do's & Don'ts in SM-VDI

### Do's

Labeled Praise for talking	Mind read
Reflect verbalizations	Yes/No Questions
Play-by-Play Announcer (Behavioral Descriptions)	Indirect commands to talk
Forced Choice/Open Ended Questions	Negative Talk
Direct prompts to talk	Enable
Wait 5" to respond	

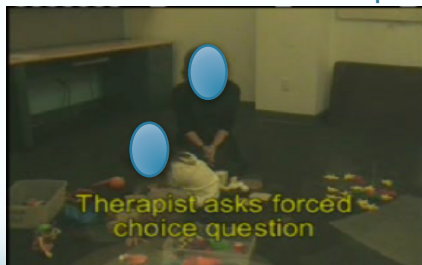

### Don'ts

## SM Behavior Observation Task (SM-BOT)

- Analogous to DPICS Baseline
- 5 phases observed (A-B-A-B-C design)
  - A1: Parent-Child
  - B1: Parent-Child + Stranger
  - A2: Parent-Child
  - B2: Parent-Child + Stranger
  - C: Faux Testing Probe
- 2' warm-up each phase with relationship enhancement skills by stranger per PCIT
- Stranger asks 1 FC at end of their phases

Kurtz (2007, 2013, 2014)

## SM-BOT Baseline Composite

Kurtz (2007)

## Response to Stranger Forced Choice Question

% Answering Strangers 1st Question

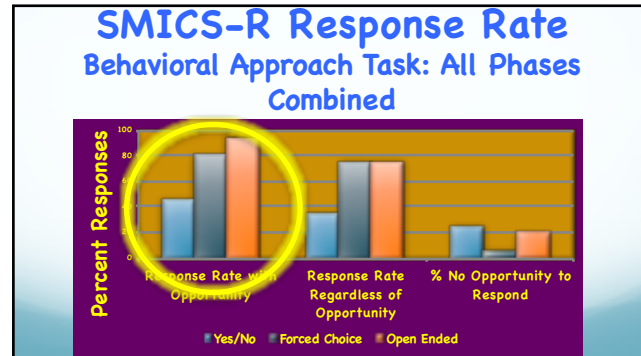

27%

% Answering Strangers 2nd Question

36%

% Answering Testing Probe

43%
