---

---

## Objectives

- Learn to help caregivers identify existing strengths to manage PCIT stuck-points (e.g. decreasing negativity/increasing PRIDE skills authentically, ability to ignore/active ignore)
- Facilitate caregiver-generated imagery and metaphors that are potent to help the caregiver remember and creatively employ new positive attitudes and behaviors
- Set-up behavioral experiments with caregivers designed with the goal to stay resilient and PCIT focused rather than resorting to old patterns
- Practice constructive therapy methods and interview practices including use of smiling and silence
